

Project Time Sheet

Team Dell

4/1/2024

In this proposal team Dell aims to describe what the goals and objectives will be for the chosen Implementation:

Design Implementation:

- Team Dell will attempt to design and implement a Clock timing sheet(program) that mimics the usage of a real sheet device and also similar programs and features to its usage. Some features and required elements are:
 - Keypad
 - This will be used to enter time/ID of the individual
 - LCD
 - This will be used for general output
 - Memory
 - Save time input
 - Identification storage
 - Arithmetic
 - Calculate the number of hours worked
 - Calculate hourly/overtime pay
- As of now delegations on who is going to do what have not been made. This will be decided by Friday.
- Some requirements that we noted that we had to be made and where they would be implemented are below
 - 8279 – Keyboard/LCD
 - 8255 – (undecided/possible new feature)
 - 8086 – (Time calculation, Sign In(1)/Out(0), Overtime Calculations)
 - 8259 – (undecided/possible new feature)
